

Announcement on NX Nastran Products

October 27, 2017

Dear NX Nastran Customers,

We are making exciting changes to nonlinear capabilities in NX Nastran. The SOL 401 Multistep Nonlinear solver has been greatly expanded with the NX Nastran 12 release coming out at the end of this month. In addition we are introducing a complementary SOL 402 Multistep Nonlinear solver. This solution is an embedment of our well known SAMCEF solver into NX Nastran. More details on the new capabilities can be found in the NX Nastran Release Guide for NX Nastran 12.

The great news is that both of these solutions are packaged together into one NX Nastran Multistep Nonlinear product - NXN030.

Previously, the SOL 401 solver was part of the NX Nastran Advanced Bundle (NXN002). Since it is now available in a dedicated Multistep Nonlinear product we have removed it from the Advanced Bundle. All existing customers of the Advanced Bundle will receive a free license of the new Multistep Nonlinear product. You are free to use it for as long as you wish. If you want to get improvements and enhancements, you will need to add it to your maintenance contract upon the next renewal.

Commensurate with the removal of SOL 401 from the Advanced Bundle, we are lowering the price of licenses and maintenance for that product by 10%. Again, those changes will become effective in your next maintenance renewal contract.

Please contact your local Siemens account executive or business portfolio developer to answer any further questions you may have.
